

New Practices for 2016

At Ditesco, we are always looking for ways that we can improve. That commonly means staying up to date with the current trends and technologies and analyzing the past when looking to the future. In order to provide clients with the best possible experience, we aim for everything from our processes to our tools to be efficient, yet still high quality. 2016 is expected to be full of advances in technology and the ways in which we do business.

New Office!

Its official! Ditesco will be relocating to a new office later this year. The design of our new office has been in process for the past few months, and construction is expected to begin in late April, 2016. We hope to be fully moved in and settled by October. The new office space will enable Ditesco to continue growing, and will help us to better serve clients with a

TECHNOLOGY HIGHLIGHTS 2016

Technology aimed at improving time management and quality in the construction and engineering industries is rapidly advancing. Below are just a few developments we are particularly excited about:

3D LASER SCANNING TECHNOLOGY

- Ease of Use/Accuracy
Improvements for: Surveying, As-BUILTS, Modeling
- Help improve design practices and safety
- Click the link below for more information!

DRONES

- Useful for aerial photos of project and monitoring construction progress
- Slightly controversial but they are quickly becoming more common (experts say they will soon become a common tool.)
- See below for more info!

INTEGRATED APPLICATIONS

- Utilized to streamline processes and support paperless environments
- This trend is expected to continue increasing in 2016
- Going paperless can even improve employee morale! - Get more information below!

Ditesco is always researching new developments in the construction management and engineering industries. We understand the importance of staying up to date to ensure that clients receive the best possible service. In 2016, we plan to incorporate new technology practices in ways that will benefit our projects and help us to do our jobs more efficiently.

Event Recommendations

The year is just beginning, so now is the perfect time to begin planning for which conferences and events you'll be signing up for.

Our recommendation - [WEFTEC 2016](#). The water quality conference will be held in New Orleans this year, from September 24th-28th. Each year that we attend this conference, we return with an abundance of new and exciting knowledge about the latest technology in the water and wastewater industry.

We also encourage you to attend [APWA's Public Works Expo!](#) 2016 will mark the first annual PWX, and the conference will showcase new innovations and technologies in the public works industry. The PWX will be held in Minneapolis, Minnesota from August 28th-31st. Registration is now open!

New Practices for New Times

2016 will be the year of real-time project management. As technology continues to advance, it will change the way that construction managers operate. Instead of receiving project updates after they are completed, technology will allow for updates to be received by project managers as they happen. At Ditesco, this means that project managers will be better able to anticipate potential issues and solve them before they become real problems. There are also significant time saving benefits associated with the direction project management is heading, and this will help accelerate the overall project schedule. We hope to see great improvements in seamless project management in the year to come. Learn more about technology predictions for 2016 [here!](#)

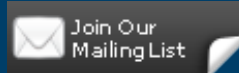

We hope you enjoyed our newsletter. If you have any questions, comments, or news to share, please feel free to reach out to us.

Thanks for reading!
